

Bootstrap

Bootstrap grid

1. Download the files `grid_starter.html` and `grid.css`
2. Use the Bootstrap grid layout (<https://v4-alpha.getbootstrap.com/layout/grid/>)
 - a. Define that the whole body is inside a div whose class is "container"
 - b. Define the "animals" div class as "row"
 - c. For each animal, the information should have the following size (columns):
 - i. Xs screen: 12
 - ii. Sm screen: 6
 - iii. Md screen: 4

The expected result depends on the browser size:

Desktop	Tablet	Mobile

Navbar

1. Download the file `hero_starter.html`
2. Use the navbar componente to create a navigation header for the website (the elements to include are the ones below `<!-- Navigation -->`. You will need to change the classes of the elements `ul`, `li` and `a`)
3. Use the nav componente to create a footer for the website (the elements to include are the ones below `<!-- Footer -->`. You will need to change the classes of the elements `a`)
4. Use the jumbotron component to emphasize the section marked with `<!-- You'll be wrapping this content into a jumbotron, and adding more classes -->` (the page might take some more time to load)
5. Add the image <http://lorempixel.com/800/300/nature/> to the carrousel.

Contact form

1. Download the file contact.html
2. Use the form control classes (form-group, form-control) to style the fields Subject and Message
3. Use the button control classes to style the submit button
4. Configure the form so that, when submitted, the message is sent to your email

Gallery

1. Download the file gallery.html
2. Use the card content type (card, card-title, card-body e card-text) to create the cards
3. View the result.
