

Excel Examples: User-defined functions

1. Consider the sheet **[20-FU.xlsm | Exmp01]** and build and try the following:
 - 1.1. Build a function that obtains the rate Euro/Dolar from two values: one in Euros and the other in dollars
 - 1.2. Build a function that, given the quantity and unit price of a product, returns the sales value with a 20% VAT rate
2. Consider the sheet **[20-FU.xlsm | Exmp02]**. Build a function to obtain the value with discount, given the quantity and unit price and considering:

Quantity	Discount rate
<10	5%
>=10	10%
