

Excel Examples: Printing configuration

Consider the sheet [03_CPI.xls | Ex01]

1. Preview the sheet to see if the content is the desired
2. Change the page orientation to vertical and define a header with the title “Applied Computing” and the current date
3. Define a footer with the page number
4. Set the print area to the table area and print to pdf just that part
5. Print to pdf the whole sheet in a single page
6. Insert a page break so that the tables with tests A and B are in another page
