Mock-ups:

<https://thedigitalprojectmanager.com/wireframe-tools/>

2. Locally, in your computer:
 - a. Create a folder named “personal” inside xampp/htdocs
 - b. Inside that folder, create a file named index.html
 - c. In the index.html build your personal website, which should contain at least:
 - i. One photo
 - ii. One description
 - iii. One video (e.g: your favourite song)
 - iv. One table (with the information you wish)
 - v. Work portfolio, with links to the exercises solved (tip: inside the “personal” folder, create a folder for each exercise block)
 1. HTML
 2. CSS
 3. Calculator
 4. PHP
 5. ...
 - d. Create a style.css (and include it on index.html) to define your website’s style (as you like).
 - e. Access <http://localhost/personal> to verify that the website has the aspect you wish
 - i. Make sure all the portfolio works correctly

3. On UPT server:

- a. Configuration:
 - i. Install Filezilla (<https://filezilla-project.org/>) and use it to connect to your area on the UPT server:

Server: sftp://alunos.uportu.pt

Username: 12345

Password: <same_as_moodle>

Notes

1: Replace “12345” with your student number.

2: Do not change the files on your area’s root (/home/12345/) or else it will not work properly.

- b. Create a folder called “personal” inside the www folder
- c. Send the created content (content of the “personal” folder on XAMPP) to that folder
- d. Access <http://alunos.uportu.pt/~12345/personal/> (change 12345 to your student number) to verify that the website has the desired aspect and that all the portfolio works properly
