

Excel Exercises: User-defined function

1. Consider the sheet **[20-FU.xlsx | Ex01]**

1.1. Build a function to obtain a person's age given his birthdate. Test the function on the column "Idade". To obtain the difference between two dates, use the VBA function DateDiff ¹ and for the current date use the VBA function Now ²

1.2. Build a function that, given the birth date, returns the full birthday month. Test the function on column "Mês Aniversário"
