

# **CSS**

## **Login Form**

Implement the CSS (style.css) and change the HTML (login.html) as needed for viewing the following form:

#### Notes:

- All the styling must be implemented on the CSS.
- HTML should only define the structure.
- The elements with content "Introduzir dados de login" (insert login information), "Dados Pessoais:" (personal data), "Email:" and "Password:" have the same style (*italic* font)
- The email validation should be automatically performed (ex: a@b.c)
- The email and password fields have weights of, respectively, 20 and 10 pixels.
- The login button has a weight of 30 pixels, rounded corners, bold, italic, white font, and its background colour is dark green. The mouse hovering over it should change its background colour to light blue.
  - o Colour picker: <a href="https://www.w3schools.com/colors/colors">https://www.w3schools.com/colors/colors</a> picker.asp

IMP.GE.194.0

## **Comment form**

Implement the CSS (style.css) and change the HTML (comment.html) needed for viewing the following form:

### Notas:

- All the styling must be implemented on the CSS.
- The CSS file must be the same as for the previous exercise (style.css)
- HTML should only define the structure.
- The options on the select box for the "Secção" (section) are: Produtos (products),
   Promoções (sale), Serviços (services) and Lojas (stores). The background is blue.
- Thetext box should occupy all the window's length, does not allow resizing and its background is also blue.
- The buttons have the same characteristics as for the previous form, except that: the button
  "Limpar" (clear) is functional, its background is dark red and the mouse hovering must
  change its colour to light pink. The Info button's background is dark grey and, on mouse
  hovering, turns to light grey.

## **Curricular Unit File**

Implement the CSS (cuf\_style.css) and change the HTML (cuf.html) needed to view the Curricular Unit File information as shown in the picture presented on the next page.

#### Notes

- Use the semantic elements available for HTML5.
- All the styling must be implemented on the CSS.
- HTML should only define the structure.
- The font is Arial and its colour is blue
- The image "top.png" must be used as an anchor for the top of the page.
- The books' covers must contain a link to the books' webpages
- Hoovering over the table rows must change their background colours.
- Hoovering over the "Webgrafia" links must change their font colour to the same as the rest
  of the website
