

Java Servlets

- 1. Create a servlet for each of the examples in the slides.
 - a. Example 0)
 - b. Example 1)
 - c. Example 2)
 - d. Example 3)
 - e. Example 4)
 - f. Example 5)
- 2. Based on the second form created with HTML and CSS, create a servlet to process the data submitted on the form:

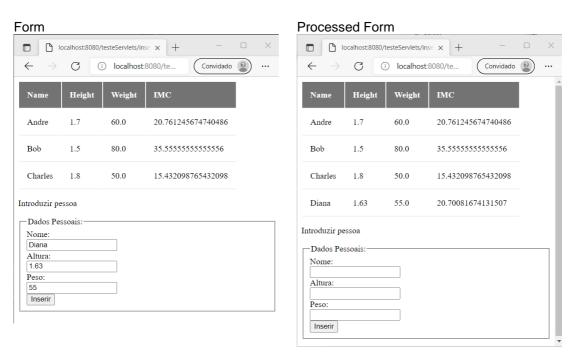

IMP.GE.194.0

- 3. Create a servlet with a page that displays the table with the persons on the ArrayList (example 4) and that also has a form to insert a new person into the ArrayList. After the submission, the info in the table must be updated. Notes:
 - The form must be generated in the class that defines the servlet, instead of a separate HTML file
 - The form's action is the servlet itself
 - If the form was not yet submitted, the value of request.getParameterMap().isEmpty() is TRUE

IMP.GE.194.0 2/2
